

The MR System

THE SIMPLICITY OF SOUNDOLIER

THE CONVENIENCE OF

“AT THE TOUCH OF A
BUTTON, I CAN TURN ON
MY HOME THEATER OR
LISTEN TO THE CD
PLAYER FROM ANY
ROOM OF THE HOUSE.”

S

Step into the world of the MR System — where whole-house music and entertainment become a part of everyday life. The system's built-in flexibility allows you to customize each room in your home to compliment your lifestyle. And, the simple touch of a button lets you take control of your audio/video components from anywhere in your home.

With the MR System from Soundolier®, convenience begins with a selection of elegant wall keypads and hand-held remotes. These versatile units allow you to configure

a basic two-zone speaker distribution system or an advanced, full-function remote control system.

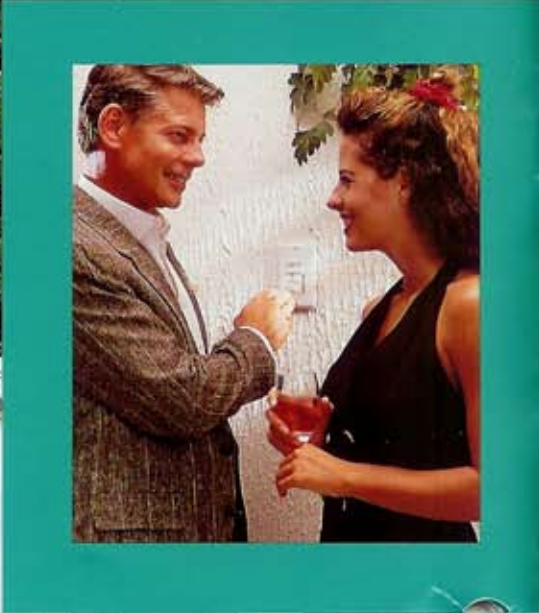

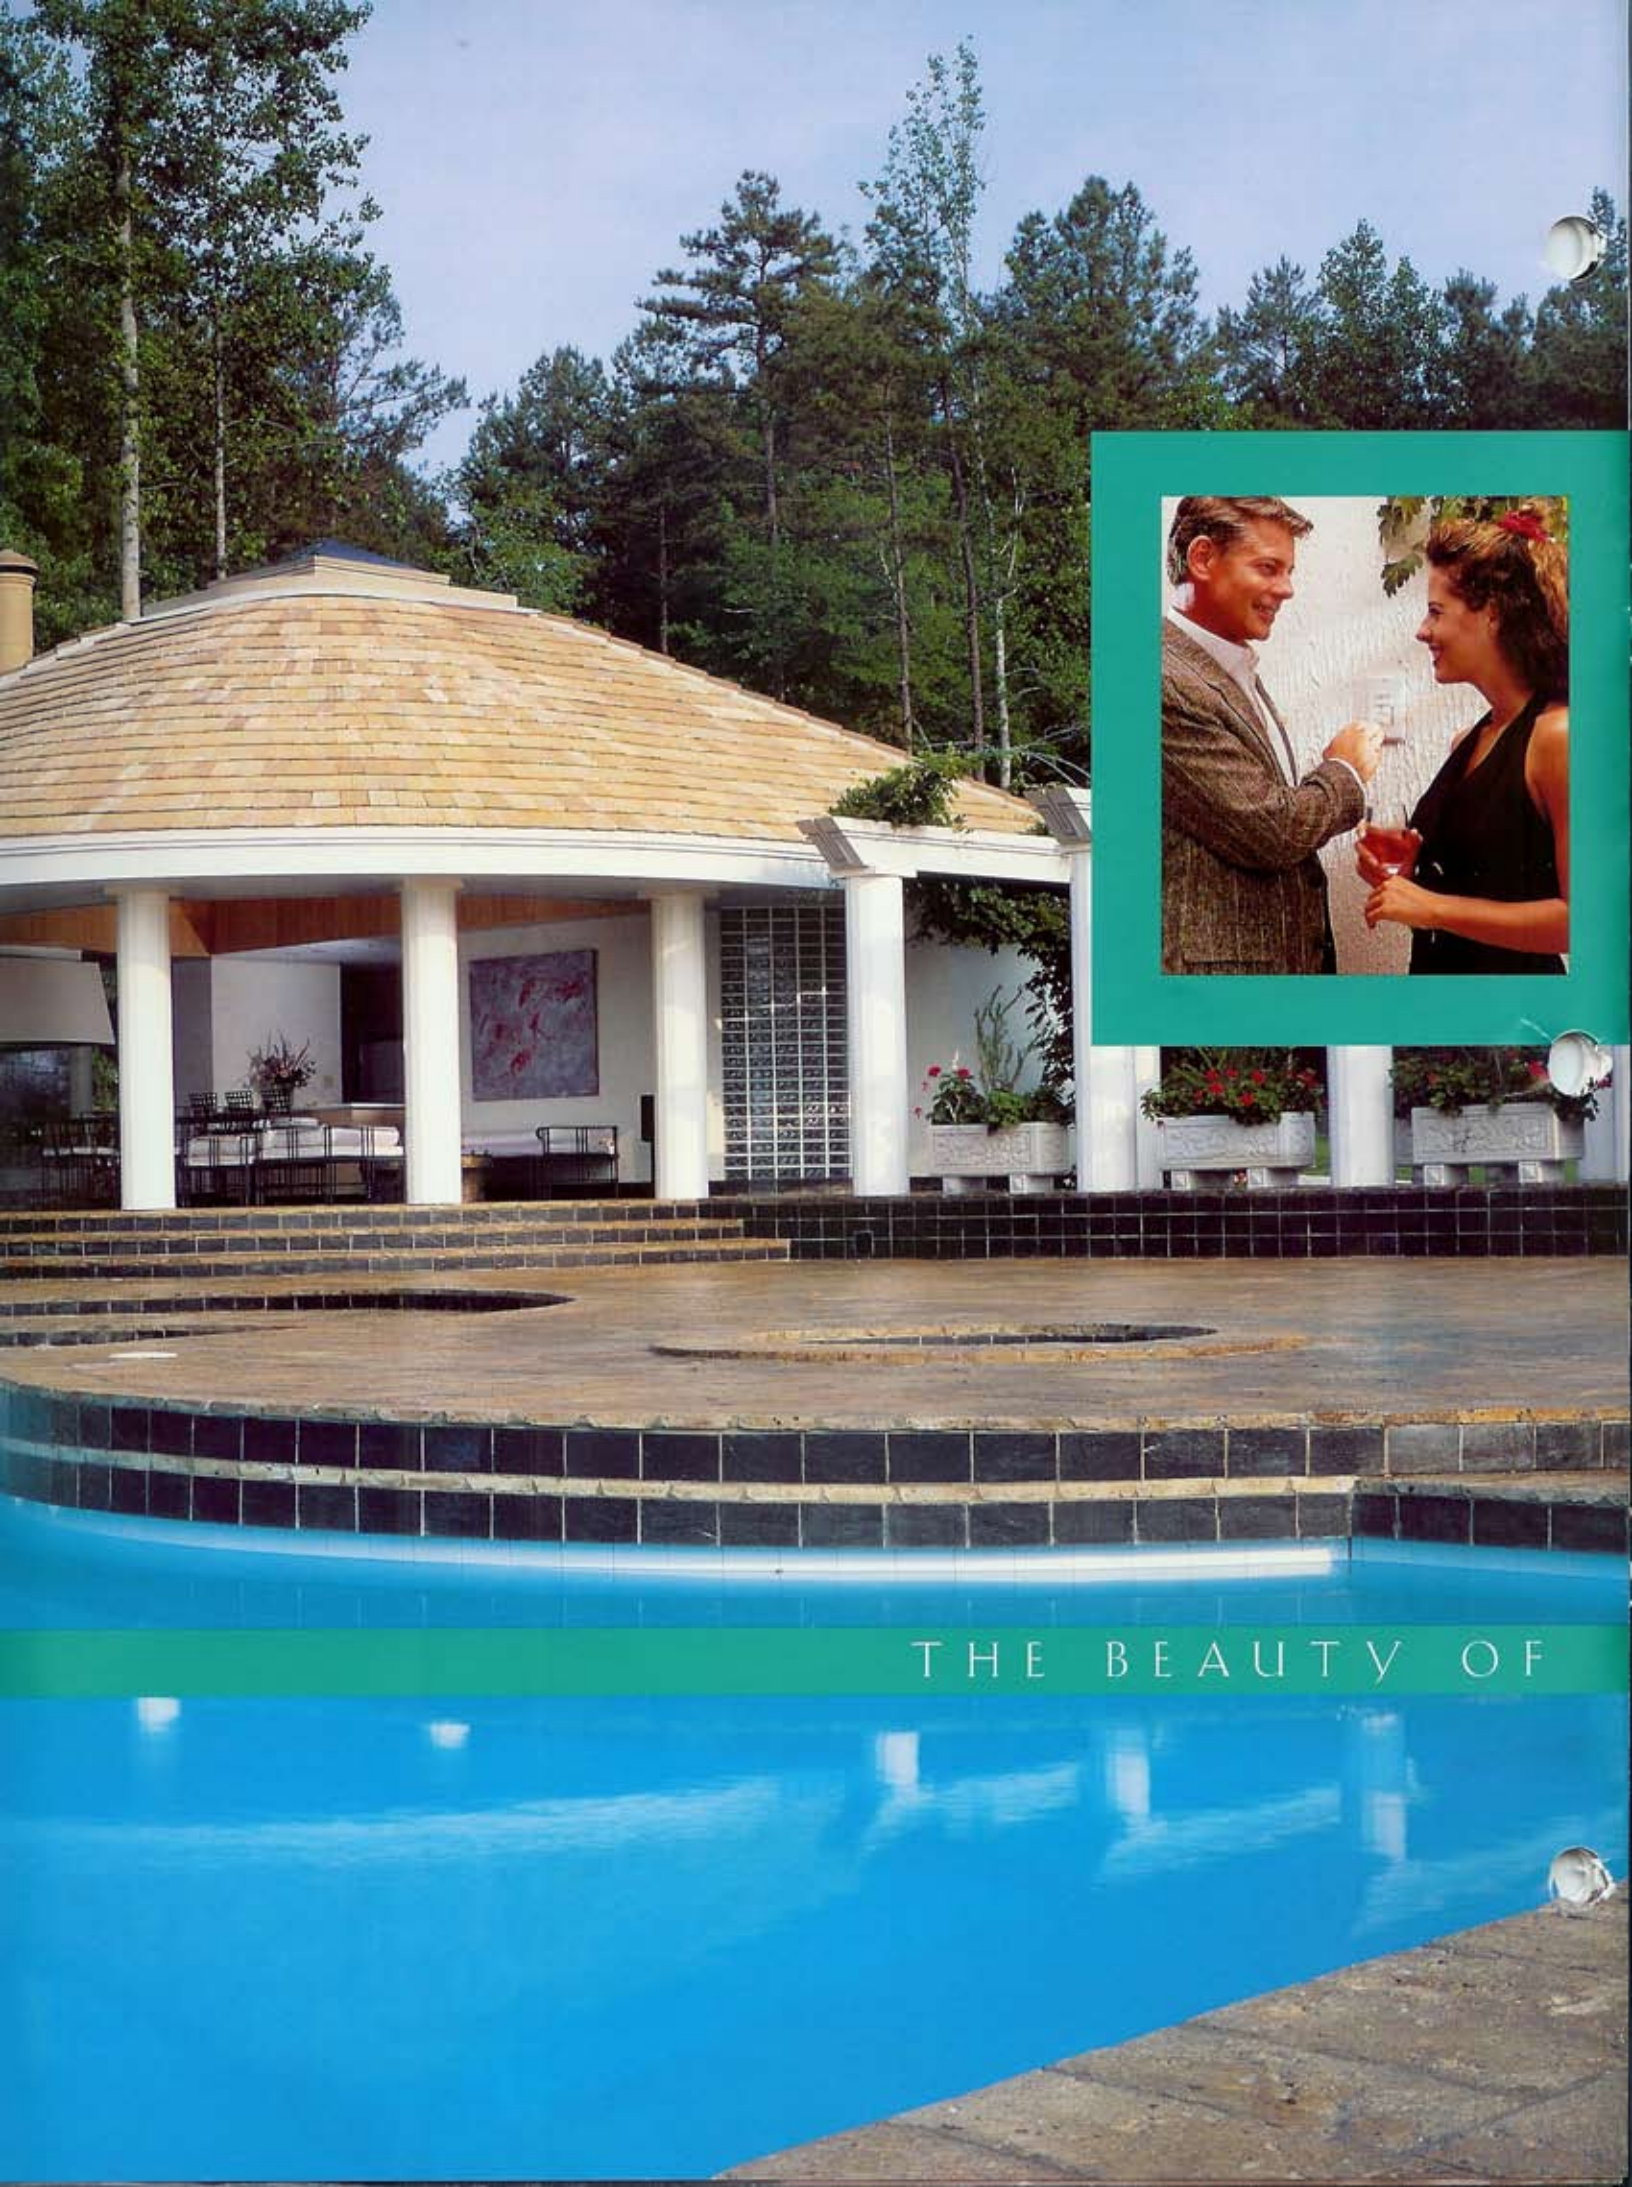

Easy-to-use keypads on the basic system allow you to control programming and volume levels.

Smart buttons on the advanced system allow you to activate your home theater, or any component, with full-function remote control.

All remote devices communicate with the hidden MR-3 Smart Room Controllers which distribute music, remote control, and telephone signals to each room. Each MR-3 allows you to access two house-wide stereo systems (A/B) and add a local (C) system such as a home theater. In addition, the

MR-3 distributes two telephone lines and automatically softens music when you're on the phone.

THE BEAUTY OF

VIEW

Whether entertaining poolside or relaxing in the family room, the MR System works beautifully behind the scenes by remote control. The only visible devices are the attractive wall keypads and hand-held remotes.

The built-in wall keypads blend with any decor and provide control in one room (KP-10) or up to eight rooms (KP-80). A hand-held remote control (RM-80) also offers the same multi-room convenience with the freedom of a wireless unit. Each room's hidden MR-3 receives signals from the remotes and sends them to a Smart Master Interface (MRZ-1) or the

programmable Smart Master Controller/Learner (MRZ-2).

The advanced MRZ-2 Learner (located with your stereo equipment) makes operating all source

components by remote control possible. Your Soundolier dealer will program the functions of your source components (VCR, CD player, FM stereo, and LaserDisc player) into the MRZ-2 and organize all commands into one easy-to-use remote control (AR-32) or similar function wall keypad (AR-20). The commands such as play, stop, volume, and channel selection will use the same buttons and operate in the same manner for all components.

It's that simple.

"WE ENTERTAIN QUITE OFTEN...THE MR SYSTEM LETS US SET THE MOOD AND CHANGE THE MUSIC WHEN WE WANT."

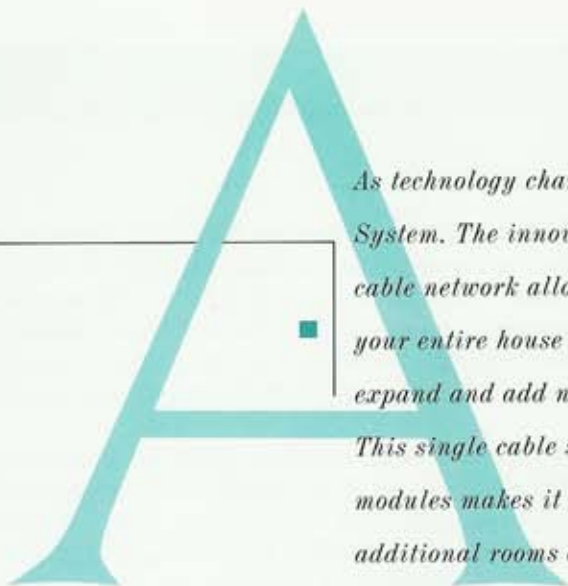

Soundolier

THE FLEXIBILITY OF

“I HAD THE WHOLE
HOUSE WIRED SO
FUTURE ADDITIONS
AND OPTIONS CAN BE
SIMPLY PLUGGED IN.”

As technology changes...so can the MR System. The innovative SmartBus™ cable network allows you to prewire your entire house today, so that you can expand and add new features later on. This single cable system with plug-in modules makes it easy to hook-up additional rooms or add future A/V options. Unlike other systems that require running multiple wires from

each room back to the main stereo components, SmartBus connects in daisy chain fashion linking each MR-3 Controller from one room to the next—a more efficient and reliable method than individually strung wires.

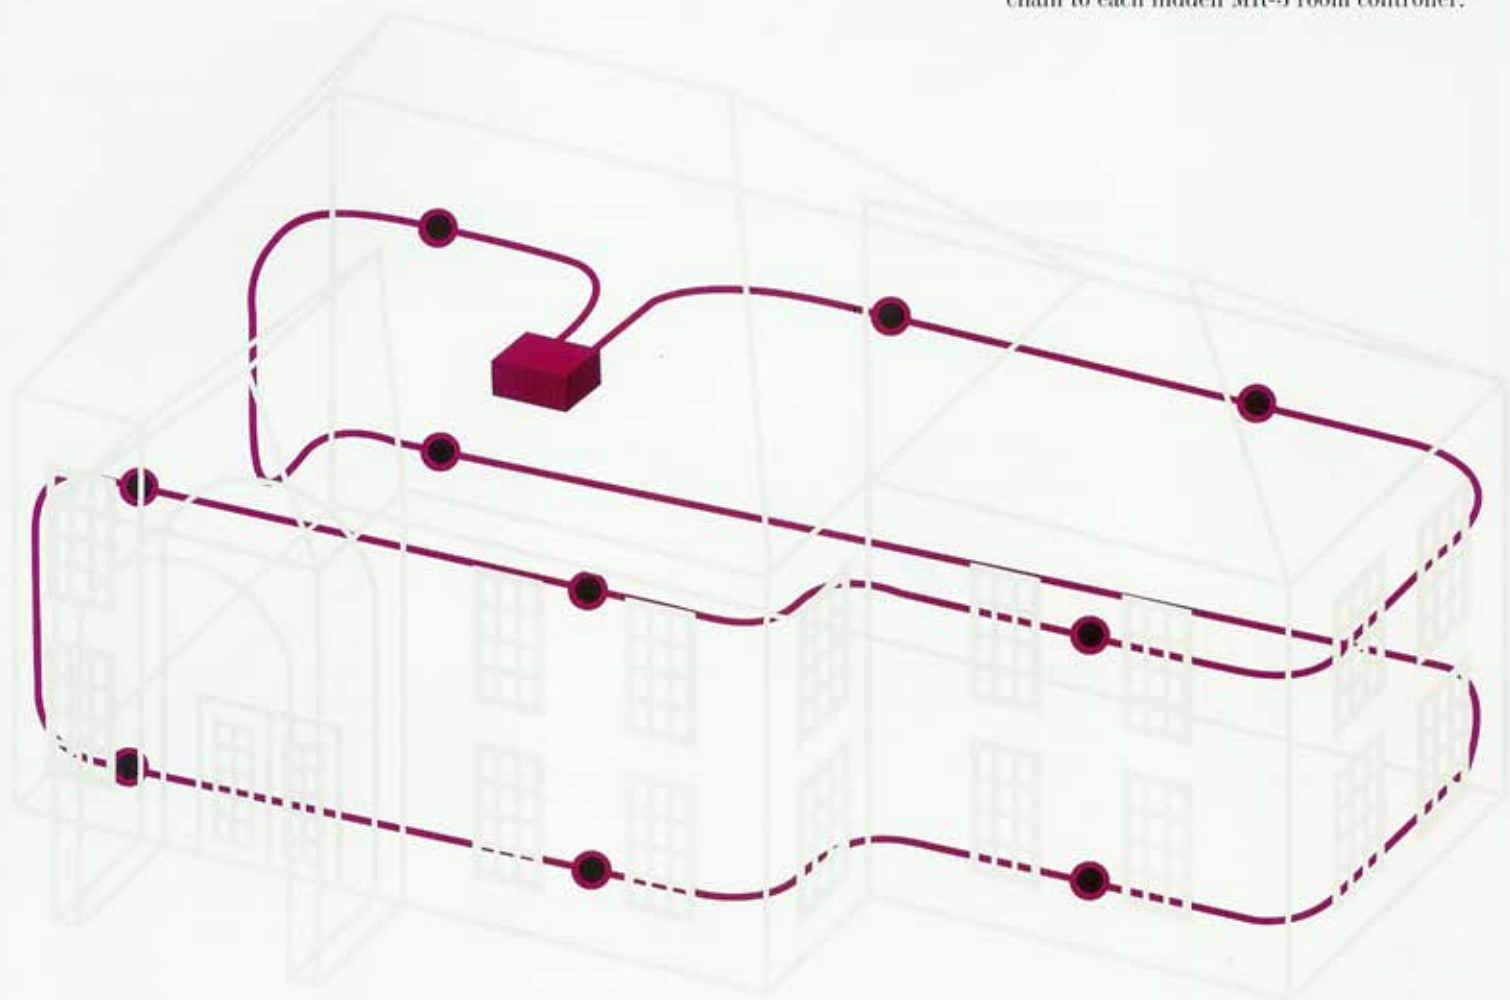

Your flexibility will be further enhanced if you add micro infrared repeaters (Model M-1) which enable you to operate virtually any IR controlled audio/video component from any room in your house. Just point your present remote control or any Soundolier MR System remote toward the M-1.

Whether you choose a basic two-zone or the advanced full-function system... wire the entire house or only a few rooms, you'll be able to enjoy whole-house music and entertainment every day.

Soundolier MR SYSTEM

A single SmartBus™ cable distributes audio, telephone, and control data to every room. Simply plug-in and daisy chain to each hidden MR-3 room controller.

Integrated Home Electronics

MR SYSTEM COMPONENTS

MR-3, Smart Room Controller. One MR-3 is required in each room connected to the system to distribute music, remote control, and telephone signals throughout the home. Each MR-3 provides access to two house-wide stereo systems (A/B) and a local (C) system. It controls all loudspeakers, keypads, telephones, and remotes. Operational features include built-in volume control, impedance matching, and automatic music softening in the appropriate room when a telephone is in use. Each MR-3 can be wall, shelf, or rack-mounted out-of-sight in a closet, basement, or attic.

MRZ-1, Smart Master Interface. MRZ-2, Smart Master System Controller/Learner. Either a basic Model MRZ-1 or advanced Model MRZ-2 is required to serve as the main link between each MR-3 Controller and the two house-wide stereo systems. Both units provide terminal connections for amp/speaker outputs, telephone CO lines, IR flasher jacks, and SmartBus™ cable jacks. High-end Model MRZ-2 also serves as a sophisticated IR learner that can be easily programmed to operate both system A and B A/V components from one easy-to-use remote. (Coupled with the Model AR-32 remote and an M-1 repeater, the MRZ-2 could be used as a stand-alone home theater control device.) Units can be shelf or rack-mounted in the main equipment stack.

SmartBus™ Cable Network. Innovative single cable system is used to connect all MR System components in plug-in, *daisy chain* fashion. Prewiring multiple cables and terminating separate home runs has been eliminated. Just run one master cable to the main stereo location. Each cable supplies music, telephone, and remote control in up to 16 rooms and can be expanded with easy plug-in modules. It is compatible with existing wiring or other systems if hard-wire adapters (SB-24) are ordered. UL Approved. CL-3 Rated.

KP-10, Single-Room Volume Control Wall Keypad. Contemporary, Decora®-style wall keypad communicates with the MR-3 Room Controller to turn on/off audio in a single room. Function keys allow you to choose between house-wide stereo systems A/B, to control room volume, and to preset volume levels. LED lights indicate which system is active and an LED bar graph displays volume level. In addition, the KP-10 can be programmed to automatically turn on/off the appropriate stereo system when connected to the advanced MRZ-2 Master System Controller/Learner.

KP-80 and RM-80, Eight-Room Speaker Controls. Both models communicate with the MR-3 to control the system in up to eight rooms. Model KP-80 is a Decora®-style wall keypad, while Model RM-80 offers the convenience of a wireless hand-held remote control (requires Model M-1 infrared repeater). Function keys allow you to select the audio system, adjust volume, and preset volume levels. In addition, both can be programmed to automatically turn on/off each system when connected to the advanced MRZ-2 Master System Controller/Learner.

AR-20 and AR-32, Whole-House Audio/Video Controls. Full-function remote control for your entire system may be used in conjunction with the MRZ-2 learner only. Model AR-20 is a Decora®-style wall keypad which provides source selection and basic function control of all A/V source components. Model AR-32 is a hand-held remote control which operates the same functions as the AR-20 keypad with expanded options for source components. It can control up to six sources on both systems A and B.

M-1, Micro Infrared Repeater. F-1, Flasher. Devices enable you to operate IR-controlled A/V components from multiple room locations. Commands are transmitted via SmartBus cable to the proper system component. Unlike other repeaters, up to eight flashers (F-1) can be connected to a single repeater (M-1) without special adapters. Ultra-sensitive receiver provides fast reaction time and minimal interference within a 40-ft. range. Receiver lens is an unobtrusive white and is available mounted to a white or ivory Decora® wall plate or separately for flush-mounting to a cabinet, wall, or ceiling.

OTHER CUSTOM INSTALL PRODUCTS

ThundraPro™ 1 Free-Standing Subwoofer. Passive 100-watt unit delivers rich bass frequencies through two 8" subwoofer speakers equipped with 1-1/2" voice coils and 21 oz. magnets. Its high-gloss, piano-like finish contrasts with the soft, cloth grille to achieve a quiet statement of strength and quality. Unit is offered in a choice of *baby grand black* or *winter white* and can be positioned upright amidst other audio equipment or on its side behind furnishings. Ideal for home theater installations.

ThundraPro™ 3 In-Wall Subwoofer. This passive 50-watt subwoofer mounts flush into walls and ceilings (great for new or retrofit applications). It contains a dual voice coil 8" subwoofer with a built-in inverted stabilizer which improves piston action and lowers distortion. ThundraPro 3 is attractively styled with a high-density perforated white grille that can be painted or decorated to match any decor.

ThundraPro™ CXA Subwoofer Amplifier/Electronic Crossover System. Versatile 100-watt unit features a built-in, active electronic crossover which allows it to function as a mono-block or dedicated subwoofer amplifier with adjustable high and low pass crossover filters. This intelligent unit automatically turns on when it senses an audio signal and has an LED-displayed power switch and bass intensity meter. Unit mounts in the main equipment rack and is finished in black.

Aura-Style In-Wall Loudspeakers. High-fidelity loudspeakers are available with a 6" or 8" woofer cone and in two or three-way versions to distribute great music throughout your home. All models feature a low-profile white grille which can be painted or decorated to match any decor. A unique mounting clamp configuration makes these three-piece assemblies a snap to install. Only a screwdriver is needed to secure the loudspeaker and bezel in place and no tools are needed to secure the grille.

Strategy Series Ceiling Loudspeakers. Innovative systems can be used in conjunction with in-walls for total surround sound or as an alternative to in-walls in standard foreground applications or zone environments. These 6" loudspeaker systems offer the frequency response of an 8" unit with increased dispersion. High performance (50-watt) and general purpose (25-watt) assemblies are available with acoustically matched enclosures, choice of transformer, selection of four attractive grilles, and several accessories. Entire system installs quickly and easily in new or existing construction.

Accessories. Choose from a wide variety of Soundolier® brand *Integrated Home Electronics* accessories to simplify and complete any professional audio installation. Selection includes high-quality Goldlink five-way binding posts, DPDT switches, RCA jacks, headset switches, cover plates, subplates, and several stereo attenuators/volume controls.
